CLASS 8 MATHEMATICS :: FA-4

Generating New Problems

---

1. Add the algebraic expressions: $(4a + 5b - 3)$ and $(2a - 3b + 7)$.

2. Multiply the monomial by the binomial: $3x(2x + 5)$.

3. Using the identity $(a + b)^2 = a^2 + 2ab + b^2$, expand $(x + 4)^2$.

4. Find the common factors and factorise the expression: $6xy + 9y$.

5. Factorise completely: $x^2 - 25$.
